

ANDIAMO™ ADVANCE

FUNGICIDE

THE FIRST LINE OF DEFENSE AGAINST PEANUT DISEASES

How do you start your peanut disease control program for the best results? With Andiamo™ Advance Fungicide.

A systemic fungicide, Andiamo Advance provides proven control of many tough-to-manage peanut diseases such as early leaf spot, web blotch and peanut rust. That systemic control, which acts on disease in old and new plant growth, combined with proven residual makes Andiamo Advance the go-to first spray in a comprehensive peanut disease program.

Powered by tetraconazole and chlorothalonil, Andiamo Advance gives the reassurance to peanut growers that they are fighting disease and resistance with one application. All of this, and a price that puts ROI first, means your peanuts and your bottom line are better when you start with Andiamo Advance.

ANDIAMO ADVANCE OVERVIEW

Active Ingredients: Tetraconazole and Chlorothalonil

FRAC Code: 3, M5

- » Broad-spectrum residual control of key plant diseases in peanut production
- » Systemic activity in the plant for control in both old and new growth
- » Combines the power of two fungicides with different modes of action for improved resistance management
- » Can be applied with aerial or ground equipment, or through pivot, roller or gun irrigation systems

START STRONG WITH ANDIAMO ADVANCE

In university and independent research trials, Andiamo Advance demonstrated effective disease control for peanut growers when used as the first spray in their disease control program. These Andiamo Advance programs provide growers with their best chance for optimum control and ROI. The information below shows the Andiamo Advance spray programs for low, moderate and high risk as outlined in the 2020 Peanut Rx[®] Program.
