

Active ingredients: cymoxanil,
propamocarb hydrochloride

REAL SOLUTIONS FOR DOWNY MILDEW CONTROL IN LETTUCE

Downy mildew can do more than damage your lettuce yields and returns. Without proper management, an outbreak can devastate an entire crop. While there are many steps in preventing and managing downy mildew, applying foliar fungicides like Cymbol™ Balance on an integrated program is a proven way to manage the disease in the field.

Cymbol Balance harnesses the proven systemic fungicide propamocarb hydrochloride and the preventative and curative activity of cymoxanil. The combined power of these modes of action gives lettuce growers both systemic and curative activity, resulting in full-season, multi-level protection for your lettuce crop.

CYMBOL BALANCE OVERVIEW

- » Strong systemic action to fight downy mildew from within the plant
- » Preventive and curative activity, plus superior sporulation control to reduce future cycles of disease
- » Multiple modes of action offer exceptional disease resistance management
- » Economical price combined with outstanding disease control performance results in proven ROI

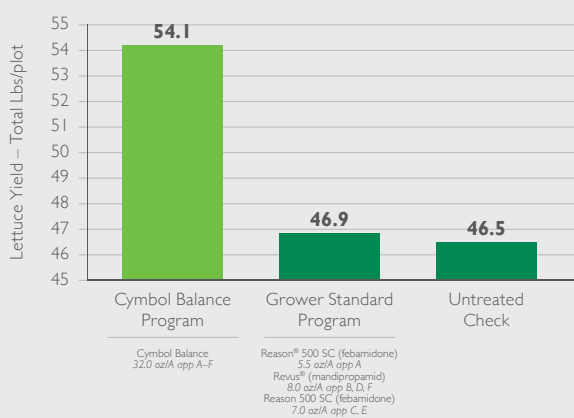

FIELD PROVEN

Cymbol Balance puts lettuce growers in the driver's seat when it comes to interval frequency. Its flexibility allows growers the freedom to choose when to apply based on their circumstances and growing practices. Fields treated with the Cymbol Balance program are proven to provide comparable disease control and yields to those treated with the Grower Standard Program.

PROVEN ROI FROM THE FIELD
